Subject: Looking for the next cohort of gifted teachers

The [WW Teaching Fellowship](#) has a decade-long history of specialized science and math teacher preparation. This will be its final year in Pennsylvania.

We're looking for the next cohort of gifted and enthusiastic teacher candidates who will provide high-quality learning experiences to middle and high school students in high-need schools. We are proud to be able to provide generous financial aid and a substantial number of fellowships this year.

Before becoming a Fellow, **Brandon Washington**, a WW Teaching Fellow and Philadelphia native, worked in the IT industry and was involved in projects in Philadelphia schools. After his introduction to these schools, he says, “I wanted to do something. I felt becoming a teacher was the best course of action.” Since completing the program, Brandon continues to teach and has started the **STREAM Engine**, which provides educational programs for students in Philadelphia.

“A huge aspect of being successful as a new teacher is having a community of support. Because of the WW Fellowship I have that.” – **Brittany John**, WW Teaching Fellow (Pottstown, PA). Brittany is in her third year of teaching, and her essay on finding your voice as a new teacher was published in ***The New Teacher’s Guide to Overcoming Common Challenges: Curated Advice from Award Winning Teachers.***

SCHEDULE INFO SESSION
